

Veterans Restoration of Louisville

Canvasser Handbook

Step 1: Door Pitch

“Hi, my name is _____, I am with Veterans Restoration of Louisville (or Veterans Restoration for short). We are currently working in your neighborhood, helping homeowners replace roofing, siding, and gutters. Our work is mostly paid for and approved by insurance companies due to recent storm damage. What I do is help homeowners schedule a free, no-obligation inspection, to see if your home qualifies. Right now our inspectors have available times of (Time 1) or (Time 2). Which one of those work best for you?

Step 2: Set up Appointment

Once the homeowner picks time, “Okay could I get your first and last name?” And what's a good phone number? Is it 502...? The last thing I need is a good email address to send over any reports and documents. If neither time works, ask the homeowner which works best: Mornings, Afternoons, or Evenings? When they pick a time a day off times in that range on other days. If no time works thru the week you can ask about weekends. The key is to find a good time and get it scheduled.

Step 3: Prep the Homeowner

"All right here is a flyer that has your appointment date/time as well as your inspector's name and number. If anything changes please reach out to the Inspector and he will do the same. Also, here is our website. Please check us out on the BBB, Google, Facebook, etc."

We want to encourage the homeowner to do there due diligence and make sure they know the time of their appt. We definitely want them to be there during the appt so make sure they dont have anything else scheduled. Leave them with something.

Step 4: Enter the Customers information into Form

Go to the Website www.roofwithveterans.com and put in the customers information in the forms and any

additional information needed (Steep Roof, tall roof) as well as any customer concerns or objections brought up at the door.

Step 5: Enter customers information in Calendar

Go to the Google Calendar and put in the inspection information for the Inspector. Screenshot the Calendar and post it in the Canvassing Group Chat.

Step 6: Follow Up

Check in with the sales team to confirm that the inspector was able to complete the roof inspection and that the homeowner was available. If not, follow up with the customer to reschedule and get them back on board.

Handling Objections

Understand and Agree - The way we handle objections is we first repeat the objections back to the customer using understand and Agree: “I understand and Agree (insert Objections).

Once you repeat the objection to the customer acknowledging you heard what they had to say you want to push the customer to bring the objections to the inspector. You can let the customer know that you will pass the information to the inspector.

Avoid providing any information on the homeowner's behalf. Reassure the customer that all inspections are free with no obligation, and that if the inspector does not find any issues, there is nothing to worry about.

Examples:

“I understand and agree that you have no money. These inspections are free and have no obligation to see if you have any damages”

“I understand and agree that your uncle is a roofer. That's why we do these inspections for free with no obligation. If we find damage and you want your uncle to know, that works too”

“I’m not interested” objection - if the customer says they are not interested, or just flat out “no”, act surprised and ask the question “Why wouldn’t you want our free inspection?” Ideally there is another objection there that we want to get out so we know what the real objection is.

Canvasser Checklist

- ☐ Phone
- ☐ Clipboard
- ☐ Intel/Street Sheets
- ☐ Flyers/Doorhangers
- ☐ Storm Maps
- ☐ Pen
- ☐ Company Laminate

Daily To-Do List

- ☐ Post a text or selfie (or both) in the Field Chat when you start — include your start time
- ☐ Post in the Field Chat when you finish — include your end time and how many appointments you set
- ☐ When you set an appointment in the calendar, screenshot it and share it in the Field Chat
- ☐ When you are done for the day, scan your street sheets into a PDF document using an app like Cam Scanner and save as “Name_date”
- ☐ Fill out the canvasser logs for the day and upload those Intel sheets at the following link:
<https://docs.google.com/forms/d/e/1FAIpQLSdxOmIP3jdJbF1JhMvuDVO1qXXf4hzhgVEs1gjLmuGDUTBhagw/viewform?usp=publish-editor>

Apps & Tools

- Google Calendar — Used to create and schedule inspection appointments. You must have access to this at all times. When you set an appointment, add the customer details, date, and time, then screenshot it and share it in the Field Chat.
- Gmail — Company email used for daily communication. Check your Gmail every day for updates, instructions, and messages from the team.
- CamScanner or Microsoft Lens — Mobile scanning apps used to scan your filled-out street sheets at the end of each day. Export as a PDF and upload before you clock out.
- Pitch Gauge — Used to measure the slope (pitch) of a roof. Always note the pitch reading so the inspector knows how steep the roof is before they arrive.

Common Terms & Definitions

- **Pitch** — The slope of a roof measured as a ratio of rise over run (e.g., 4/12 means the roof rises 4 inches for every 12 inches of horizontal run). A roof is generally considered steep at 7/12 or greater.
- **Summary** — The estimate provided by the insurance company that outlines what they will pay to repair or replace the damaged property.
- **Claim Number** — A unique reference number assigned by the insurance company to track and manage a homeowner's insurance claim.
- **DOL (Date of Loss)** — The date the storm or damaging event occurred. This is required by the insurance company when filing a claim.
- **Deductible** — The amount the homeowner is responsible for paying out of pocket

before the insurance company covers the rest of the claim.

- **Depreciation** — The reduction in value of materials due to age and wear. Money held back by the insurance company representing the difference between the old material and new. Can be Recoverable (most common — paid out after the work is complete) or Non-Recoverable (not paid back to the homeowner).
- **Actual Cash Value (ACV)** — What the damaged product (roof, gutters, siding, etc.) is worth today, taking depreciation into account. This is the initial payment from the insurance company.
- **Replacement Cost Value (RCV)** — The full cost to replace the damaged materials with new construction. This is the total amount the insurance company will pay once the work is completed.
- **Adjuster** — The person employed by the insurance company who investigates and

processes the homeowner's claim and determines the payout.

- **Public Adjuster** — An independent adjuster hired by and working on behalf of the homeowner (not the insurance company) to help maximize the claim settlement.
- **Agent** — The person who sold the homeowner their insurance policy. Agents typically have little involvement in the claims process unless something goes wrong with the policy.
- **Collateral Damage** — Storm damage beyond the roof that affects other parts of the home, such as gutters, window wraps, siding, and other trades.
- **Contingency Agreement (Rep Agreement)** — A document signed by the customer selecting our company as their contractor of choice. This locks us in as the contractor once the claim is approved.

- **Storm Chasers** — Out-of-town contractors who follow severe weather events around the country. They typically leave the area shortly after the storm, offering little long-term support or warranty.
- **Workmanship Warranty** — A warranty we provide to the homeowner that protects against any issues caused by errors or problems during the installation of the materials.
- **Manufacturer Warranty** — A warranty provided by the manufacturer of the roofing material that protects the homeowner against product defects.
- **Modified Bitumen** — A roofing material used when the slope is too low for shingles but not flat enough to collect standing water. Often used on low-slope roofs.
- **TPO/PVC** — Commercial roofing products used on flat roofs. These are single-ply membrane systems common on commercial buildings.

- **Standing Seam Metal Roof** — A high-end metal roofing system with concealed fasteners, meaning no exposed screws or nails on the roof surface. Offers a clean, modern look and excellent durability.
- **Barn Style Metal Roof** — A metal roofing system with exposed fasteners. More economical than standing seam and commonly seen on agricultural or rural buildings.
- **Felt (Underlayment)** — A protective layer installed underneath the shingles. Ice and Water Shield is a premium version used in valleys, eaves, and around penetrations for extra waterproofing protection.
- **Code** — The Building and Residential Codes enforced in the local area. All work must meet current code requirements, which can sometimes affect the scope and cost of a project.
